

RISHAB SHARMA

Senior Backend Engineer · Node.js / TypeScript / Python · AI/LLM Systems · Distributed Systems

+91 8937022875 · Ghaziabad, UP · rishabsharma112000@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

I design and ship production-grade distributed backend systems and multi-tenant AI/LLM agent platforms — the kind that hold 99.9% uptime under real load, not just in demos. Over three years across Credex Technology and Chicmic Studios, I have driven measurable outcomes: 35% latency reductions, 40% overhead cuts, and agentic pipelines built on CrewAI, LangGraph, and MCP toolchains that replace manual workflows at scale. I am ready to step into a Senior or Lead Backend Engineer role at a product-led company where I can own system design end-to-end — from data model to deployment.

CORE SKILLS

AI & LLM Orchestration	CrewAI, LangGraph, LangChain, OpenAI API, MCP, n8n, Agentic Workflows, Prompt Engineering
Backend & Architecture	Node.js, NestJS, Express.js, FastAPI, REST, GraphQL, Microservices, Event-Driven Architecture, System Design
Languages	TypeScript, JavaScript (ES6+), Python
Databases & Caching	MongoDB, PostgreSQL, MySQL, Redis — Query Optimisation, Indexing, Schema Design
Cloud & Observability	AWS (EC2, S3, Lambda, CloudWatch), Docker, Prometheus, GitHub Actions, GitLab CI/CD
Security & Testing	JWT, OAuth 2.0, RBAC, OWASP, Rate Limiting, Jest, Mocha, Chai, Unit & Integration Testing
Integrations	Salesforce CRM, SugarCRM, Twilio, Webhooks, Third-party REST APIs

WORK EXPERIENCE

Software Engineer — Backend | Chicmic Studios Pvt. Ltd.

Dec 2025 – Present · Mohali, India (Hybrid)

- **35% latency reduction** on a cloud-native multi-tenant AI agent platform handling 10+ concurrent workflows — achieved via async processing, Redis caching, and event-driven queue architecture.
- **3× toolset coverage expansion** by integrating MCP tools, LangGraph, and webhooks into agentic pipelines across 5+ third-party services, enabling dynamic tool-routing without per-workflow code changes.
- **40% improvement in horizontal scalability** — designed 3+ production microservices (Node.js + FastAPI) with clear service contracts and independent deployment boundaries.
- **25% reduction in manual workflow overhead** and **30% faster task turnaround** by deploying AI-driven agentic automation pipelines with full observability via CloudWatch and Prometheus dashboards.

Freelance Backend Engineer | Self-Employed (Contract)

Sep – Nov 2025 · Remote

Took a deliberate three-month contract period between full-time roles to deepen hands-on n8n automation and deliver two production Node.js systems independently.

- **Zero unauthorised access incidents** across 2 production Node.js/Express/MongoDB systems — full JWT auth stack, RBAC, and rate limiting deployed within 6 weeks each.
- **~5 hrs/week of manual reporting eliminated** for a client via an n8n automation pipeline integrating 3 third-party services with conditional branching and error-recovery logic.

Software Engineer — Backend | Credex Technology

Jan 2023 – Aug 2025 · Ghaziabad, UP (On-site)

- **99.9% uptime SLA** sustained across 5+ production Node.js services handling 10,000+ daily API requests — enforced via structured error handling, circuit breakers, and distributed tracing.
- **40% reduction in operational overhead** (~12 hrs/week recovered) by engineering AI automation agents using CrewAI, LangGraph, and OpenAI API for internal reporting and classification workflows.

- **20% improvement in average API response time** (320ms → 256ms) through MongoDB aggregation pipeline refactoring, composite indexing, and MySQL query optimisation — measured via query plan analysis.
 - **35% reduction in manual data-entry effort** (~8 hrs/week saved) by integrating Salesforce CRM and SugarCRM via REST APIs with bi-directional sync across 3 platforms; estimated throughput uplift ~15-20%.
 - **15% reduction in rollback rates** across 3 development teams after designing GitLab CI/CD pipelines with automated testing gates, staged rollout strategies, and environment parity checks.
-

KEY PROJECTS

Automated Agent Service Provider · Dec 2025 – Present

[\[Add live URL or GitHub repo link here\]](#)

- **Zero-downtime deployments** on a microservices backend (Python FastAPI + Node.js) supporting 10+ concurrent AI agent workflows with a **35% latency improvement** via Redis caching and async queuing.
- Dynamic LLM orchestration layer built with CrewAI/LangGraph — supports pluggable tool-routing, JWT/RBAC auth, and 5+ external integrations via MCP and webhooks.
- Full observability stack: CloudWatch metrics, Prometheus dashboards, horizontal auto-scaling, and graceful degradation under partial tool failure.

View — Budget Forecasting Platform · Oct 2024 – Aug 2025

[\[Add live URL or GitHub repo link here\]](#)

- **Sub-200ms response times** on financial forecasting backend processing 500+ records across 10+ modules — achieved via composite indexing, stored procedures, and query plan analysis.
- **30% improvement in DB query performance**; schema refactor eliminated N+1 queries and full-table scans across core reporting endpoints.

Customer Engagement Backend Platform · Oct 2023 – Sep 2024

[\[Add live URL or GitHub repo link here\]](#)

- **99.8% reliability** on a RESTful backend integrating CRM, Twilio telephony, and financial modules at 1,000+ daily transactions.
 - **25% faster query execution** after schema refactor; modular service boundaries enabled independent scaling of telephony vs. CRM components.
-

EDUCATION & CERTIFICATIONS

B.Tech — Computer Science & Engineering · Dr. A.P.J. Abdul Kalam Technical University · 2020 – 2023

Diploma — Computer Science & Engineering · Subarti Polytechnic College · 2017 – 2020

AWS Cloud Practitioner — In Progress (2026) · **Node.js Application Development** — 3+ yrs production · **AI & LLM Integration** — OpenAI, CrewAI, LangChain, LangGraph
